

What is True Colour Grey?

Oberon TCG® Technology allows electrical workers the ability to properly see their work task without compromising their safety. Update your old green arc flash faceshields and suit hoods to help minimize mistakes and ensure electrical workers do not have to "lift up" their arc flash protection to see their work!

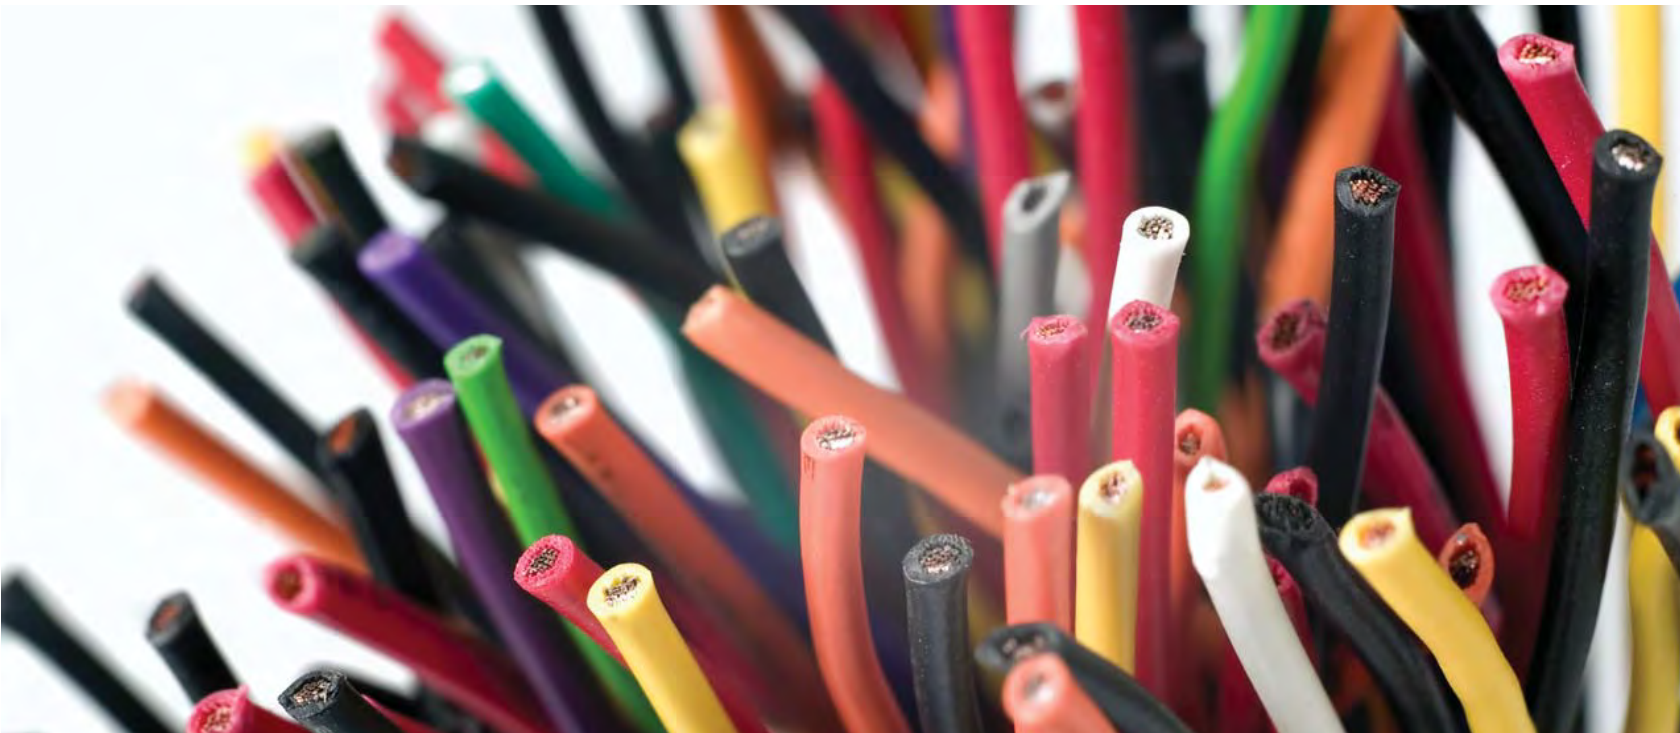

Green Shield

TCG® Shield

Oberon TCG lens technology is safer than old green/yellow products because of the improvement in worker performance. Human error is the leading cause of arc flash incidents. When electrical workers can see clearly they are less likely to make a mistake that could cause an arc flash. Oberon TCG products provide "always on" protection that allow all visible light including colours to pass through the lens with no distortion.
